Qualitative Data Analysis

PROFESSOR BURREL VANN JR

Qualitative Analysis

- The examination and interpretation of non-numerical observations
- Discover underlying meanings and patterns

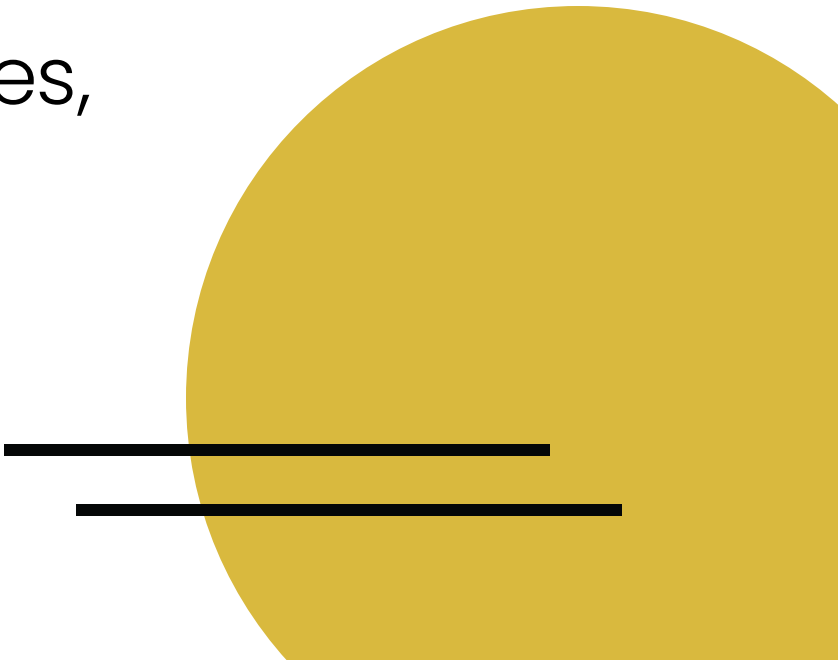

Unobtrusive

DATA CONVERTED TO TEXT

field notes, recorded interviews, pictures, responses, etc transcribed
into written format

researcher examines text for patterns, themes, experiences,
meanings

Data Analysis

INTERVIEWS

Transcripts, notes from interviewing
people

ETHNOGRAPHY

Notes about your interactions with people,
feelings, interactions with space, people's
interpretation of their lived experience

Looks at "the stuff" of life in a social
context

Data Analysis

PARTICIPANT- OBSERVATION

Notes about interactions w/ people, notes
about research feelings, interpretations

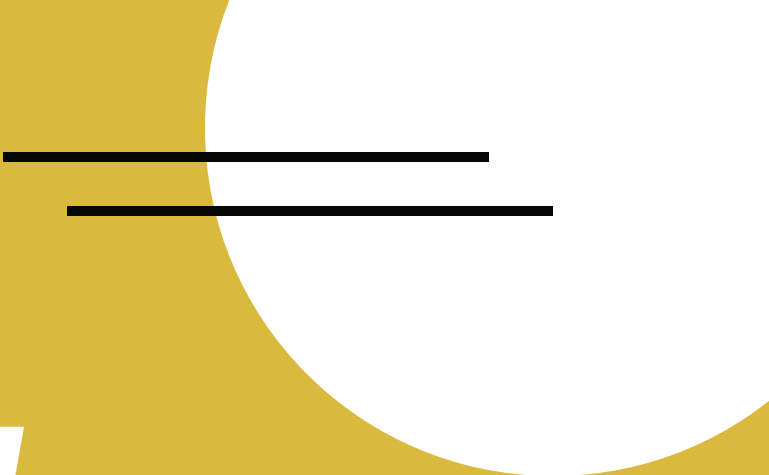

Data Analysis

CONTENT ANALYSIS

Text used as measure of relationships,
meaning,

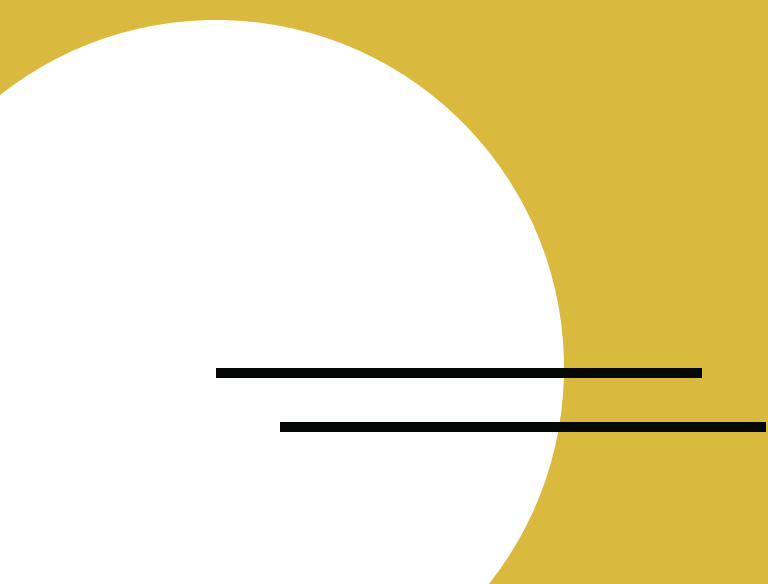

Newspapers, Journals, Blogs, Tweets

*observations compared
with one another and with
the evolving inductive
grounded theory*

CONSTANT COMPARISON FOR THEORY-
BUILDING

Codes and Coding

CODING

Classifying or categorizing individual pieces of data, coupled with some kind of retrieval system.

CODING UNITS

- Interview (notes, memos)
- Book, paragraph, sentence?

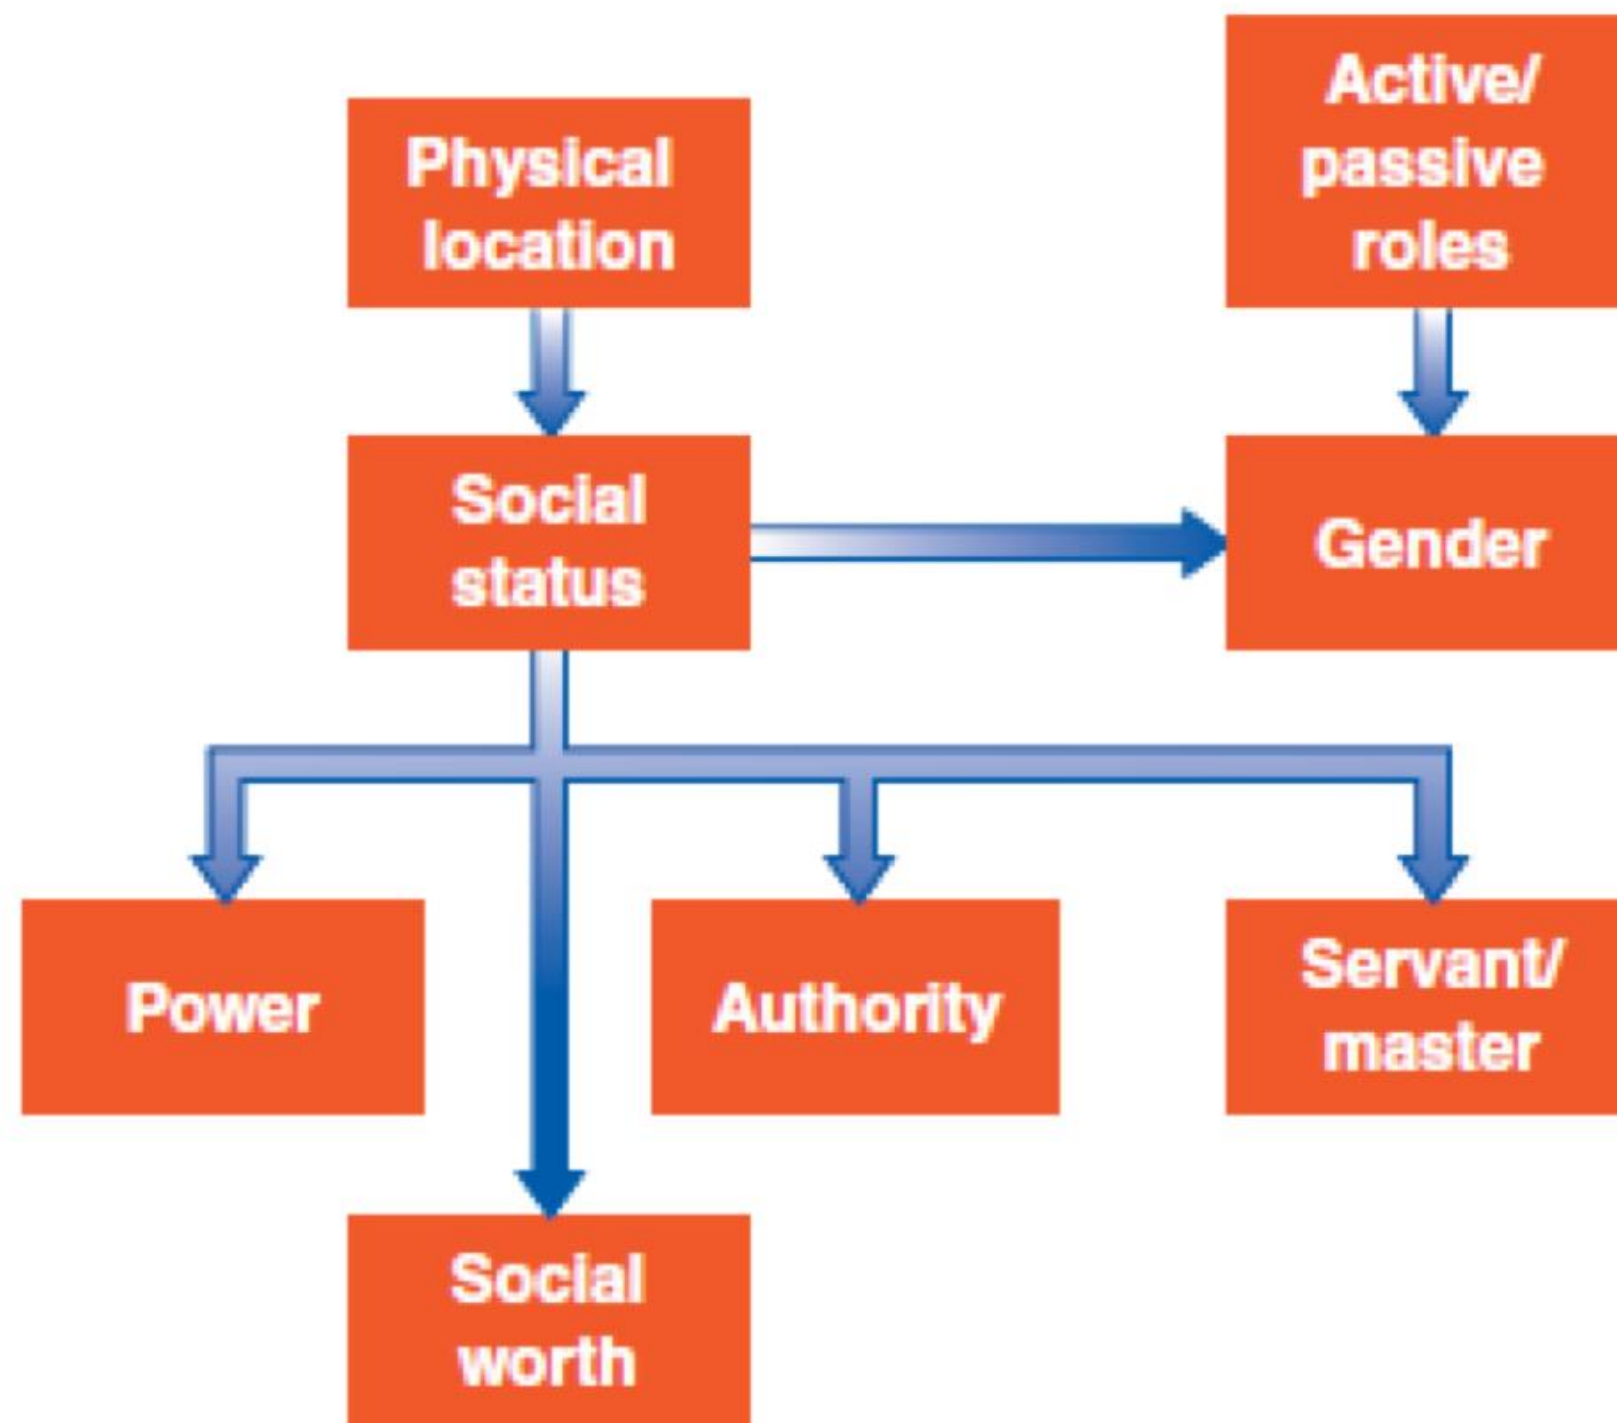

OPEN CODING

- the initial classification and labeling of concepts in qualitative data analysis.
- a reanalysis of the results, aimed at identifying the important, general concepts.
- Identify the central concept that organizes the other concepts.

Codes and Coding

PRACTICE THEMES

"... and I thought the professor should have given me at least partial credit for the homework I turned in..."

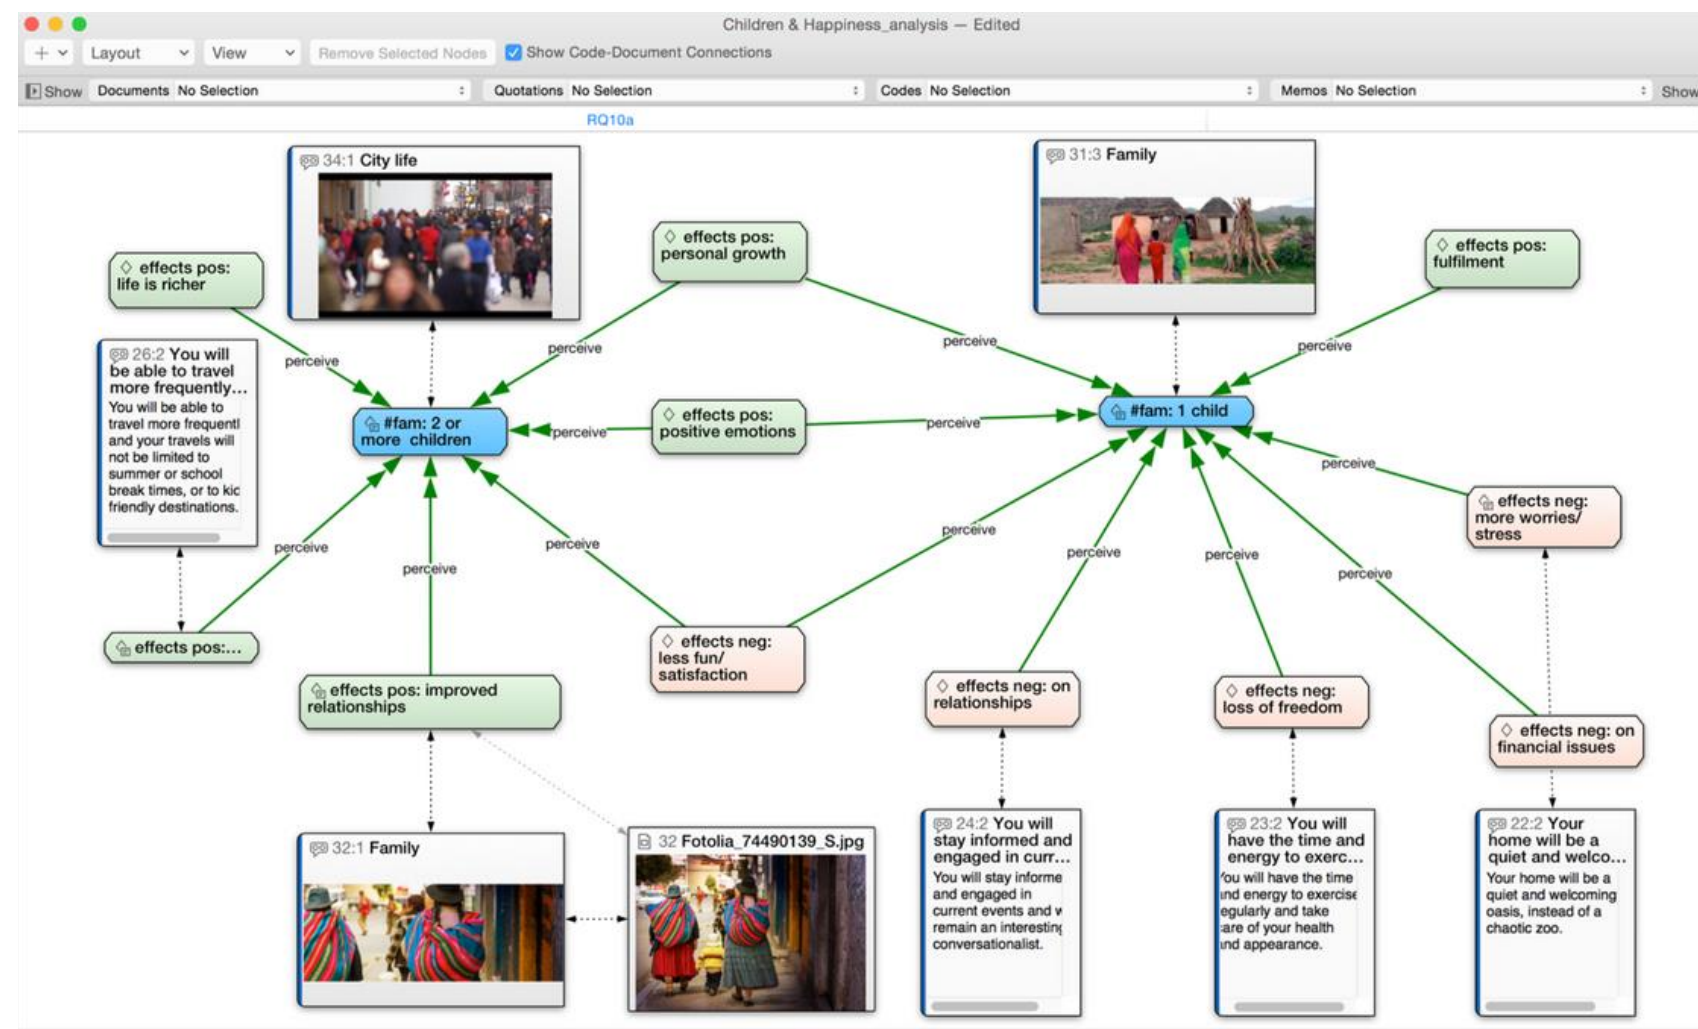

CONCEPT-MAPPING

The graphic display of concepts and their interrelations, useful in the formulation of theory.

Qualitative Data Analysis Programs

- Dedoose
- MAXQDA
- Google Forms

Atlas.ti

The screenshot shows the Atlas.ti interface with the 'Comments on parenting blog' document open. The interface includes a 'Navigator' on the left, a 'Margin' on the right, and an 'Inspector' at the bottom right. The main area displays the text of the blog comments. The 'Navigator' lists various codes and their frequencies. The 'Margin' shows the document's metadata and a list of codes. The 'Inspector' shows the document's ownership and creation date. The main text area displays the following comments:

Comments on parenting blog

I was happy before I had kids and am happy now. However, the first year of motherhood was rough. I was only 25 and becoming a mom forced me to grow up. All of a sudden I had to become a lot less selfish and a lot more responsible, which is not easy in a culture that glorifies self-centeredness and irresponsibility. I'm a better person for becoming a mom, even if I'm not any happier.

If anything, I think what this maybe shows is that happiness isn't everything. I have a 4-year-old daughter, and having a child has probably made me less "happy" — there are more opportunities for conflict with my wife, more financial stress, more activities that would fun but have to be deferred to the future. On the other hand, I love my daughter and wouldn't change things for anything, even if having her sometimes means less day to day "fun" or "enjoyment." So it's a trade-off. It doesn't mean that we shouldn't undertake the

I recently read Stephanie (http://www.nytimes.com/2009/04/01/why-does-anyone-have-children/?page=4) writes, "[D]oes the arrival of children doom couples to a less satisfying marriage. Not necessarily. Two researchers at the University of California at Berkeley, Philip and Carolyn Cowan, report in a forthcoming briefing paper for the Council on Contemporary Families that most studies finding a large drop in marital quality after childbirth do not consider the very different routes that couples travel toward parenthood. ... The Cowans found that the average drop in marital satisfaction was almost entirely accounted for by the couples who

PC is currently working full-time as a hair dresser and part-time with own cleaning company in a medical office. Aside from TC, husband/father also resides in home. Husband works full-time as supervisor at former job. No changes have occurred with work schedules with PC or husband since first interview.

PC thinks her life is predictable from month to month. Yes, family needs are met through the resources regularly have available. If she needs them, PC does believe that she has enough support from family, friends, and church or community to help meet her family's needs. The support would come from her family and her husband's family and the church. But she has not needed any support recently.

PC and husband both read to TC. Most of the time PC reads to TC before dinner (on her busy day), TC and PC sitting together and TC looks at pictures to see what is going on with the pictures in the book. This happens at least 4 times a week and lasts about 30-45 minutes each time. PC states "we might not do just one book, it might be one or two or whatever book he wants to choose." Reading is done in English. PC agrees with Fier in that TC very much enjoys being read to aloud, and PC knows this because TC asks "a lot of questions" about the questions such as "why did this happen?" or "why did that happen?" PC hopes that TC gets a clear understanding of different things, "whatever is going on in the book, it may be through heaven (hard to hear this part) everyday of a clear understanding of conversations, what's right and what's wrong." Reading time occurs every night at bedtime. PC reads more than one book to TC "at least a couple of times in a day" than PC agrees with Fier that it is daily when Fier suggests it, but PC also states that TC has had a wide variety of different children's books and other books. "Hardly ever" does reading time and because TC loses interest, PC repeatedly states that she has to "cut it off." PC then goes on to say "but I like it though because he will learn a lot, I did the same thing when I was growing up." TC looks at books by himself about 2 times per week but PC comments that TC does not often pick up different ones, rather it is PC who picks up different ones. TC always picks up his favorite Dora book all the time. When Fier suggests that TC picks up his favorite book daily, PC agrees. PC takes TC to the library about 2 times a week but they just started going to library 2 months ago. TC has not been in any programs since he started. There are no circumstances that would make it difficult for PC or husband to read to TC as much as they would like, because PC's schedule is whatever she makes it and she made it that way so she would have time to do what is right for him. Since the first interview, PC has been reading to TC "a little more" and PC believes this has something to do with him being in school with other students because he is now more interested. PC agreed with Fier in that Head Start really helped (can't hear the rest). Now, PC gets more into the characters she is reading, such as make voices. PC points out familiar words, talk about pictures, and mention the author's names (however, interviewer did not ask PC about the frequency to these answers). PC is led to do these new things because TC prompts PC with questions such as "how did (PC) get the book, who did this book?" when read to. When reading books, TC and PC mostly talk about the book itself and sometimes TC will ask questions like "Did this ever happen to me," whatever is in the book, mostly things that are occurring in the book. At first PC states that she does ask TC questions when reading but when asked what kind of questions, PC changes her mind and states that it is the other way around, but it is TC that asks her questions. PC apologetically begins to talk about the question a TC asks referring to the Dora book, "where is her mom?" Does she have a dad, Does she have any brothers and sisters? Is book related to her? Is she alone, or does she have a family? TC asks about the pictures but interviewer does not ask PC about the frequency of his questions. Most of the time PC asks TC about the first letter sound of a word in the book. PC never asks TC if two words rhyme. Everyday husband and TC talk about sounds and rhymes, stories passed on from his generations. TC can tell what is coming next in the story because through the videos there is a map that gives TC directions to where Dora's destination is at. TC likes to read the same book most of the time. PC has introduced TC to books he has not seen before, such as a children's book of bible stories that he likes "a lot" and Chicka Chicka Boom Boom that the school gave him (the one he "loves" although he just got it), and Cat in the hat books by Dr. Seuss. PC states that very often TC gets to read a book with PC or others. Then PC goes on to say "maybe every few days because if PC is not introducing something new there are other family members with children who live nearby that TC shares books, tapes
