THEORY

Professor Burrel Vann Jr

OBSERVATION

DIRECT:

- YOUR OBSERVATIONS OF SOCIETY

INDIRECT:

- OTHERS' OBSERVATIONS OF SOCIETY

EXPLANATION

REASONS (A THEORY) FOR THE
PATTERNS YOU SEE IN THE
OBSERVATIONS

Theory (based on prior research) is
an **explanation** for the relationships
between variables and patterns we
observe

MODELS OF THEORY BUILDING

DEDUCTIVE THEORY

Top-down (literature) theory construction

INDUCTIVE THEORY

Bottom-up (data-driven) theory construction

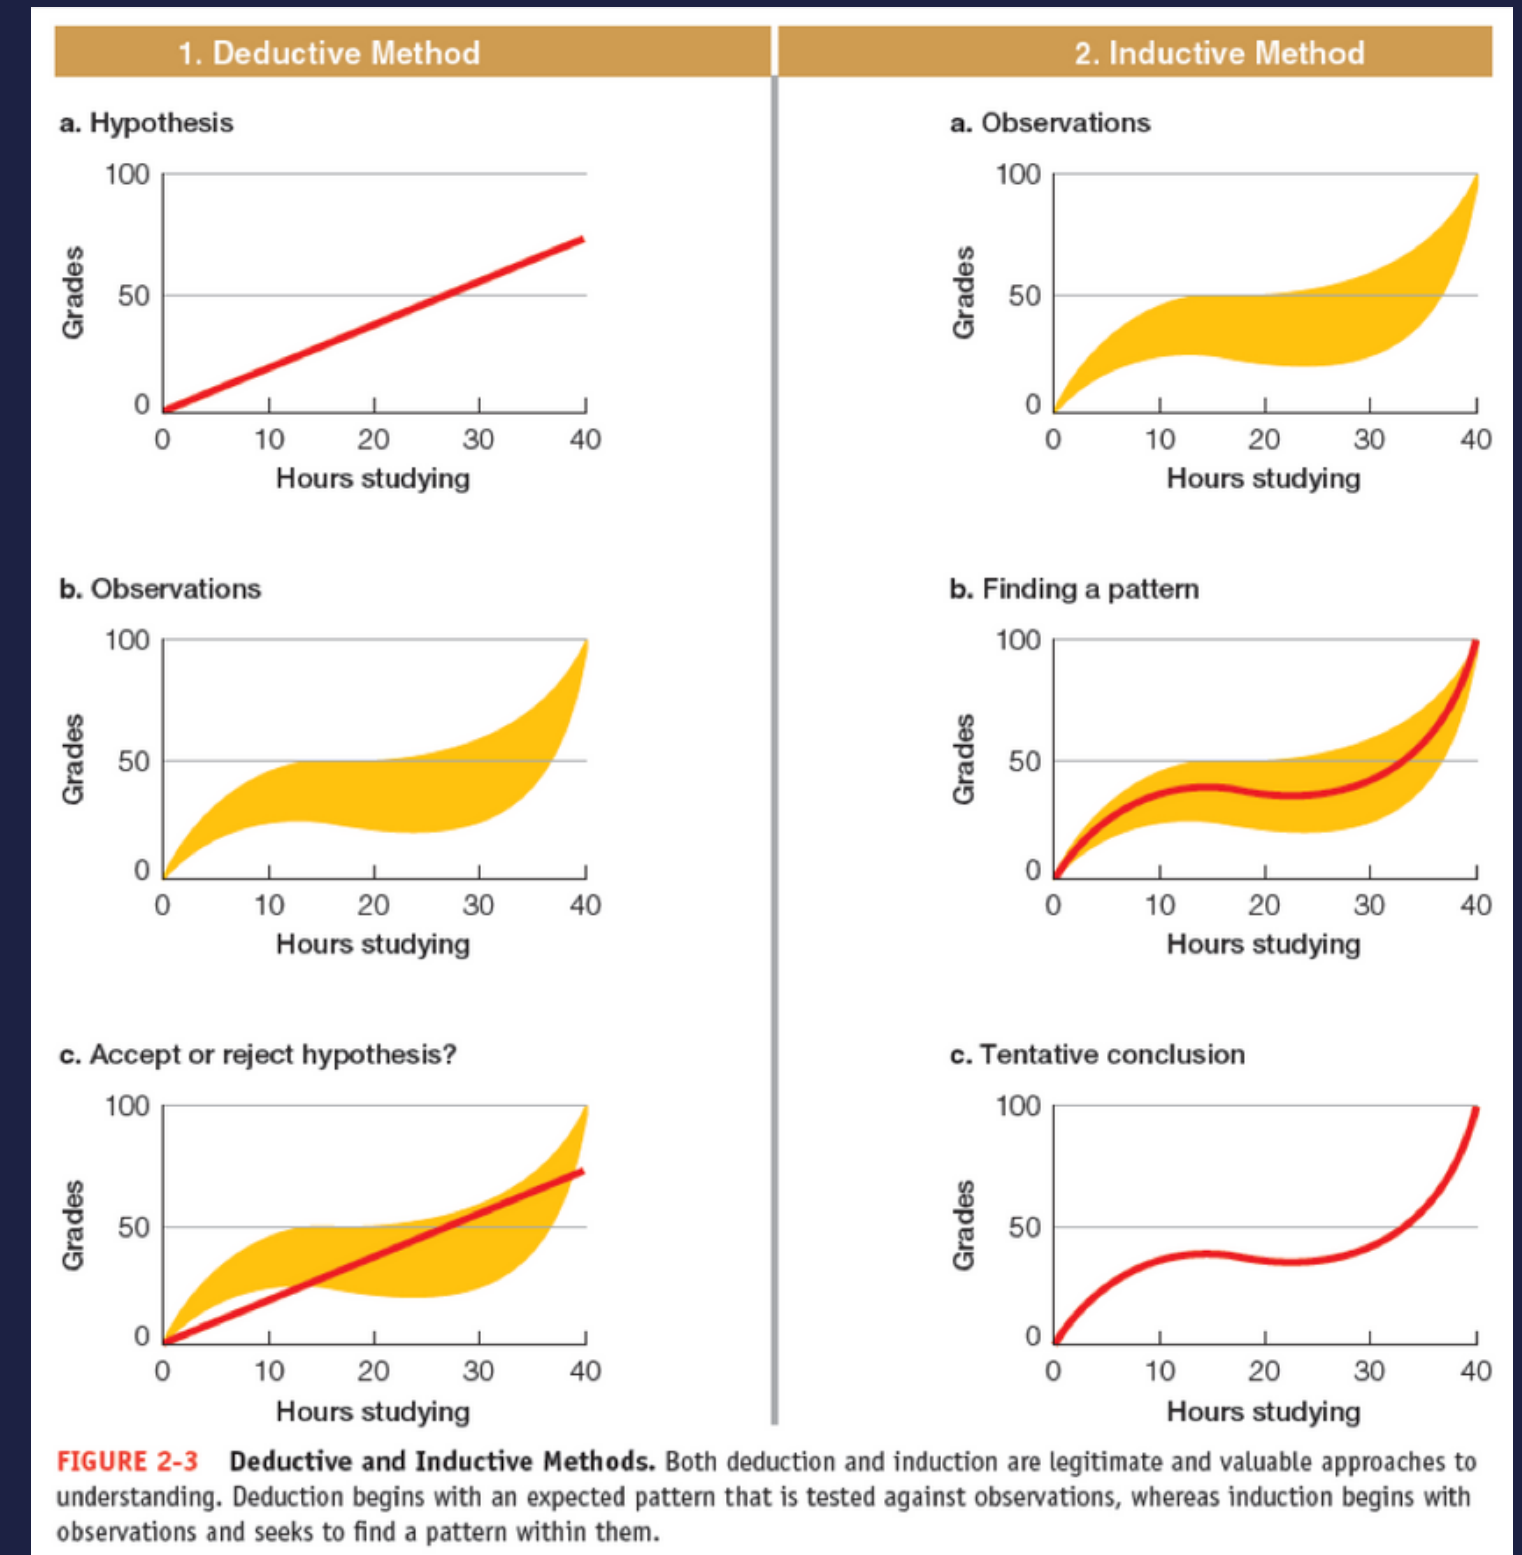

MODELS OF THEORY BUILDING

DEDUCTIVE

1. develop research question
2. read research on relationship b/w variables
3. develop theory & hypotheses based on research
4. collect data
5. analyze data to test theory

INDUCTIVE

1. develop research question
2. read research on relationship b/w variables
3. collect data
4. analyze data
5. develop theory to explain data

THEORETICAL UNDERSTANDING

X causes Y

HYPOTHESIS

$$Y = f(X)$$

Theoretical expectation

Operationalization

$$y = f(x)$$

Testable hypothesis

$$y \stackrel{?}{=} f(x)$$

Observation
(hypothesis testing)

TRADITIONAL MODEL OF SCIENCE

Deductive Theory Construction
